Pad-Loc™ Processor Pads

Four-Edge Seal Keeps Moisture In Its Place

- Pad-Loc™ Processor Pads feature a unique multi-layer, sealed-edge design that virtually eliminates all excess moisture from your chicken trays, even when shingled.
- The bottom layer is made of high-strength tissue that attracts moisture – without wicking from the poultry – and pulls it into the absorbent fluff pulp fibers in the middle of the pad.
- The top layer of polyethylene film prevents the poultry from sticking when frozen.

Available In Rolls For Maximum Convenience And Versatility

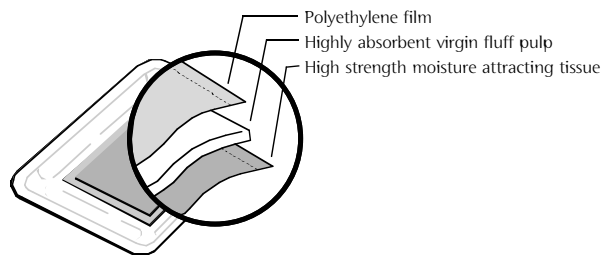

- Pad-Loc™ rolls are available in a full range of sizes and absorbencies to best meet your needs and help speed up automated packing operations.

Significantly Reduces Inventory Requirements

- By stocking rolls in several widths and cutting the pads to one of multiple preset lengths, the same rolls can be used for many different sized packs.

Better Packages Mean Better Business

- Pad-Loc™ Processor Pads help keep packages fresher looking and attract more impulse purchases and improved customer satisfaction.
